

PreCONNECT® flexNET - flexible networking

Conventionally structured cabling with enhanced flexibility

Do you want more flexibility in the spatial layout of your workplaces? Then PreCONNECT® flexNET is the right choice for you! This network solution is an extension of PreCONNECT® isoNET.

The additional flexibility is achieved by interconnecting a passive copper consolidation point in the tertiary sector. The great advantage: Completely new end user connections become easily available at the passive consolidation point and existing workplaces can be moved. The extension and restructuring work can be performed without interrupting ongoing operations. As a result, PreCONNECT® flexNET is the perfect response to the demands of the increasingly dynamic working processes in the office environment, in manufacturing and in building management.

The planning, installation and commissioning of the innovative, standards-compliant and passive building cabling system are undertaken by Rosenberger OSI itself or by its qualified local partners. Only high-quality components are used.

The benefits at a glance

- ✓ Increased flexibility in the spatial layout of workplaces.
- ✓ Disruption-free extension and restructuring during ongoing business operation possible through the use of passive consolidation points in the tertiary sector close to the endpoints.
- ✓ Time-saving, cost-effective LAN cabling with single and double-sided pre-assembly and cabling design created by experts.
- ✓ A secure investment as the passive components can be moved to a new site and reused in the event of a relocation.

Rosenberger

Our portfolio

Passive copper consolidation points in the tertiary sector close to the endpoints

Glass-fiber cable products pre-assembled single-sided and double-sided

Gel-free optical fiber cables

Reduced-diameter optical fiber cables

MTP® | MPO connecting cables (as an alternative to LC)

CU cables and CU patchcords

Cables available in class B2 (CPR)

Service provision from experts: Planning, production, installation and commissioning of the network solution from a single supplier

The benefits to you

- Optimum conditions for the redesign of local space layouts
- Retrofitting is performed as far as possible without interruption or disruption to business operations due to the diversified local distributor structure

- Time savings of up to 15% at the installation site

- Simpler splicing

- Forward-looking thanks to reduced cable duct occupancy to permit future expansion

- Reduced cable-laying work
- Highly compact solutions

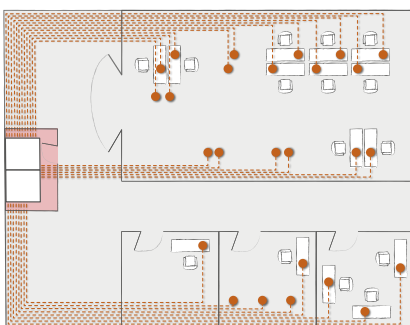

- Fully harmonized components

- Currently the highest available fire protection class

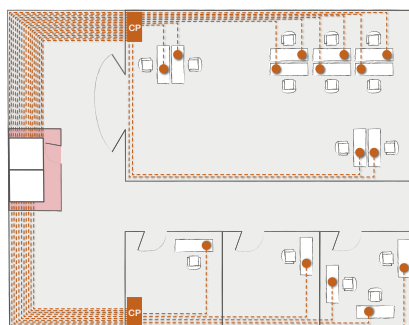

- Reduced coordination effort
- Consistent project planning
