There's Always Room for Improvement

Dear Sir or Madam,

Flexibility is a positive characteristic we are currently exploiting to the full. As part of our "Compass" project we are reorganising our business processes to enable us to work even faster and more efficiently through perfectly aligned teams. You, our customer, are the focus of all we do - which is why we are now closing ranks! In the future, our sales operations and customer data centre in France will also be moving closer together. Our new branch office has recently opened in Paris. And our brand new MXC™ and RQC Breakaway plug-in connectors will also open up new fields of application. We hope you enjoy reading our new issue and look forward to receiving your feedback!

“COMPASS” – A PROJECT TO TAKE YOU INTO THE FUTURE

“Nothing endures but change,” said Heraclitus of Ephesus. And how right he was! Today, in order for a company to survive in our fast-changing and complex market environment, it must have a sharp business sense and broad experience. It must also have the courage to apply new methods and adapt to new situations. We at Rosenberger OSI, a healthy medium-sized company, are determined to offer our customers innovative high-end products and services. We want to be fast, flexible and reliable over the long term. To meet these goals well into the future, we are embarking with you on new paths.  

Best regards,  
Thomas Schmidt  
Managing Director

ROSENBERGER OSI IN FRANCE: NEW SUBSIDIARY OPENS IN PARIS

In May 2015 our French colleagues moved into their new office space in western Paris. Mme. Salomé David and M. Thierry Besrest from sales and marketing will provide better personal support for our data center customers in France. They will also continue to serve as contacts for our partners throughout the country. A special showroom, equipped with the latest datacenter products as racks, housings and cabling, can also be used for individual training sessions.

NEW WEBSITE ONLINE: WWW.DATACENTER-CABLING.COM

Announcing www.datacenter-cabling.com, the new
website that we’ve designed for our data center customers and other interested parties in Europe! Here you’ll find everything you need to know about Rosenberger OSI’s products and services for data centers.  

**MXC™ WITH UP TO 64 FIBERS IN ONE CONNECTOR – LET THE FUTURE BEGIN!**

Rosenberger OSI is the first European manufacturing partner to receive training for the MXC™ connector and is currently going through a demanding certification process that will soon be completed. The MXC™ is known as the “Big Data Connector” owing to its high fiber count and capacity for processing huge volumes of data.

**RQC BREAKAWAY – THE SMART SOLUTION FOR OUTDOOR INSTALLATIONS**

The rugged 4-fiber RQC Breakaway connector is a special product created by Rosenberger OSI’s developers. In order to meet the exacting operational safety requirements for outdoor use, they designed a connector assembly with a predetermined breaking point.  

**TRAINING COURSES AT ROSENBERGER OSI**

Whether general fiber optic knowledge or special topics such as cabling standards based on the EN50600 standard: forward-looking training planning is essential to ensure that the whole team is completely up to date with current technical requirements. This is why Rosenberger OSI offers a range of different FO-related training courses. All the courses - whether they impart basic knowledge or deal with practical IT cabling issues - are taught by professionals!

ROSENBERGER OSI EVENTCALENDAR

World Hosting Days 2015

More than 6,300 participants attended the World Hosting Days at the Europapark in Rust from 15.-17. March. Rosenberger OSI’s exhibition of products for an optimum IT cabling infrastructure proved to be a major attraction for the visiting industry experts.

Although most of the experts were more familiar with hosting and cloud solutions, many readily recognised the need for excellently structured cabling. As a result, our colleagues Gerald Berg, Ab Vingerling and Thierry Besrest were constantly engaged in discussions with prospective customers on location and developed specific solutions in response to customers' individual inquiries.
WHD 2015 – a total success!
